NEHAL INGOLE

Forward Deployed / Solutions-Focused Engineer · Cloud, Infrastructure & Observability

Pune, Maharashtra, India · nehalingole2001@gmail.com · +91 7397966719 · LinkedIn · GitHub · nehalingole.in

PROFESSIONAL SUMMARY

Technical professional with hands-on experience designing, deploying, and operating production cloud infrastructure, real-time messaging systems, and modern web platforms. Strong foundation in AWS, Kubernetes, Docker, CI/CD, and observability (Prometheus, Grafana, CloudWatch). Proven ability to turn complex technical work into reliable, documented solutions. Seeking a Forward Deployed Engineer role to combine deep technical skills with customer impact — guiding architecture, driving adoption, and translating platform capabilities into measurable business outcomes.

CORE TECHNICAL SKILLS

Cloud & Infra	AWS (EC2, S3, Lambda, CloudWatch, RDS, SQS, ECR, EKS, IAM, VPC), Terraform, Docker, Kubernetes
Observability & Ops	Prometheus, Grafana, CloudWatch, MQTT / EMQX, CI/CD (GitHub Actions, Jenkins), Linux
Languages & Data	TypeScript, Python (working knowledge), SQL, REST APIs, Git · Experience with high-scale messaging & data pipelines **Frontend /**
Delivery	React, Next.js (SSR/SSG), Redux, TanStack Query, Tailwind CSS · Strong documentation & design-system practices **Practices** Architecture discussions, implementation planning, Agile, code reviews, technical writing, open-source maintenance

PROFESSIONAL EXPERIENCE

Software Developer – Frontend & Cloud

Kshan Tech Soft Pvt Ltd · Jan 2025 – Present

- Own end-to-end delivery of 5+ production React.js / TypeScript / Next.js applications with strongly typed components, custom hooks, and modern state management.
- Designed and maintain CI/CD pipelines (GitHub Actions) and AWS deployments (EC2, S3, Lambda, CloudWatch) enabling reliable, repeatable releases and infrastructure monitoring.
- Improved application stability through systematic testing, debugging, performance tuning, and proactive infrastructure observability — experience directly relevant to customer production health and adoption.
- Partner with product and engineering stakeholders to translate requirements into scalable software — practice that maps directly to solution design and implementation planning with customers.

Creator & Maintainer

AnimioUI (Open Source) · Mar 2026 – Present · animioui.in

- Designed, built, and shipped a production-ready React + TypeScript component library focused on high-performance UI and animations, with fully typed APIs, documentation, and a consistent design system.
- Maintain the library as open source, supporting community usage and iterating based on real feedback — experience that strengthens technical communication and product advocacy skills.

Software Developer

Alif View Media · Apr 2023 – Dec 2024

- Built a fully responsive business website from complex Figma designs using React.js, TypeScript, Tailwind CSS, and GSAP, delivering pixel-accurate, accessible, cross-browser UI with strong Core Web Vitals performance.
- Owned the full frontend delivery lifecycle (design handoff through production), demonstrating the end-to-end ownership expected in customer implementation and technical advisory work.

DevOps Intern

Linux World Informatics Pvt Ltd · May 2021 – Aug 2021

- Supported CI/CD workflows using Kubernetes, Jenkins, Docker, and Git; completed 10+ hands-on DevOps and ML projects that built foundational skills in containerization, orchestration, and automation

.

SELECTED TECHNICAL PROJECTS

EMQX Real-Time Messaging Platform (Notion Document)

EMQX · Docker · Kubernetes · AWS · MQTT · Prometheus · Grafana

- Designed and deployed a highly available EMQX MQTT cluster on Kubernetes supporting 100,000+ concurrent connections with auto-scaling, load distribution, and high availability.
- Provisioned AWS infrastructure, implemented Prometheus + Grafana dashboards for health/connections/alerts, and built CI/CD pipelines — delivering production-grade, observable, low-latency real-time messaging.

AI Workspace · a-icanvas.vercel.app

Next.js · React · TypeScript · Tailwind · Docker · OpenRouter

- Built an AI productivity platform featuring chat, infinite canvas, mind maps, and diagram generation. Used Next.js SSR/SSG patterns, strongly typed React components, and multi-model generation; containerized and deployed end-to-end with a performance-focused architecture.

HLS Adaptive Bitrate Streaming (link)

AWS S3 · Docker · Adaptive Streaming

- Implemented a scalable HLS adaptive bitrate video pipeline using Docker and AWS S3, enabling secure storage, efficient processing, and reliable multi-quality delivery to end users.

EDUCATION

B.Tech in Information Technology · Government College of Engineering, Karad (Shivaji University) · 2019 – 2023 · CGPA 7 / 10

ADDITIONAL

- **Open Source:** 13+ merged contributions across infrastructure, AI, and web projects; creator and maintainer of AnimioUI.
- **Technical Writing:** 80+ Hashnode articles covering React, TypeScript, AWS, and DevOps, and cloud-native practices— evidence of clear technical communication.
- **Certification:** Artificial Intelligence on AWS.
- **Hackathons:** 2nd Runner-Up, GCEK Hackathon 2022; 4th Position, GCEK Ideathon 2023.
